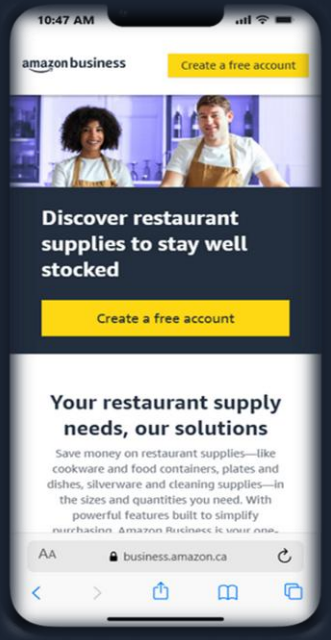
Amazon Business Canada: LP Mobile Optimization



Amazon Business Paid Search | Canada Market | Q1 2026 Results

Executive Summary

+15%

Mobile CVR Improvement

Post-optimization uplift

Phase 1-4

Track CVR Performance across Phases

81%

Mobile Traffic Share

of total clicks

Key Findings

- Post-migration CVR decline on mobile devices identified and addressed with targeted optimizations
- Focus on tracking Conversion rates broken down by Landing Page URLs & Device types
- Canadian-specific H1 headlines + hero image fixes + CTA spacing drove measurable uplift
- Phase 4 expanded to 5 additional pages (Restaurant, Shipping, Small Biz, Medical, Janitorial)

Project Timeline & Phases

Hypothesis: Including Canadian-specific H1 headlines and adjusting hero images for mobile would improve Non-Brand CVR for CA landing pages. Both hypotheses were validated with dramatic results.

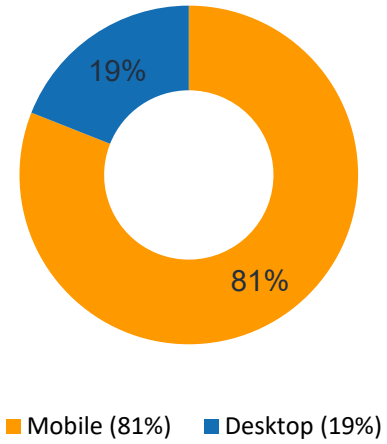
Results: +23% CVR

Phase 4 | Feb 2, 2026

Restaurant Supplies
Shipping & Storage | Small Business
Professional Medical | Janitorial

Mobile vs Desktop: Traffic & Conversion Analysis

Click Distribution by Device



Mobile Performance

143,691 clicks | 2,456 conversions | 1.71% EFID CVR
Mobile represents 81% of all traffic but had lower CVR pre-optimization - making mobile fixes the highest-impact lever.

Desktop Performance

32,869 clicks | 796 conversions | 2.42% EFID CVR
Desktop maintains higher CVR at 2.42% - future desktop optimization could further close the gap and compound overall performance.

Opportunity: Further mobile refinements and desktop optimization represent significant incremental registration gains.

Confounding Factors & Considerations

Additional signals impacting CVR measurement

⚠ Factors to Control For

- Email Channel Spike: Business Savings Event drove elevated CVR during P3 window — may inflate results.
- Bid & Budget Changes: Portfolio-level bid modifier adjustments ongoing as Y26 performance stabilizes.
- Device-Level Bid Modifiers: Mobile/desktop bid splits being refined — affects traffic mix and CVR.
- Seasonal Patterns: Q1 2026 seasonality may influence baseline CVR independent of page changes.
- Traffic Volume Shifts: OCI transition and campaign restructuring may alter audience composition.

✓ Analytical Safeguards

- Used Restaurant Supplies as unmodified control page to isolate optimization effect.
- Tracked CVR across 4 distinct phases to separate migration impact from optimization impact.
- Compared modified vs. unmodified pages within same time window to control for seasonality.
- Phase 4 analysis held separately to avoid mixing P3 and P4 signals.

Mobile Optimization Playbook

Proven tactics for CA landing page CVR improvement

CA

Canadian H1 Localization

Include country name in H1 headline. Localized copy resonates with Canadian business buyers and improves relevance signals.

Mobile Image Optimization

Ensure hero images are sized and positioned to avoid cropping on mobile viewports. Test across iOS and Android breakpoints.

CTA Spacing & Clarity

Refine spacing beneath primary CTA buttons. Adequate padding reduces mis-taps and improves click-through on mobile.

Sub-headline Addition

Add descriptive sub-headlines below H1 to improve clarity and engagement. Reduces bounce from confused visitors.

Navigation Simplification

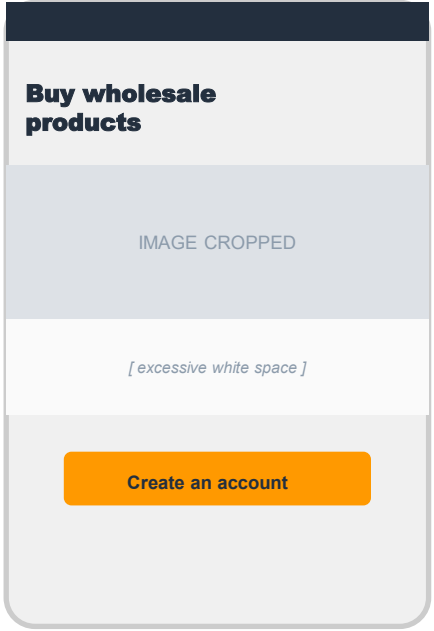
Remove hamburger menus from landing page nav to reduce distraction and keep users focused on the conversion path.

Hero Image Refresh

Replace generic/purple hero images with category-relevant visuals. Authentic imagery improves trust and CVR.

The Optimization Framework

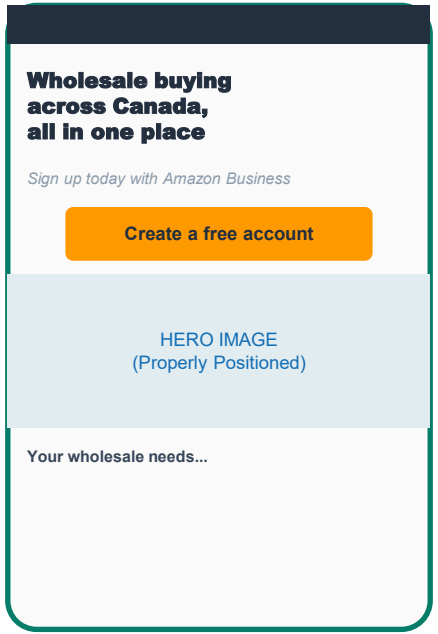
BEFORE (Pre-Optimization)



Issues Identified:

- Generic (non-Canadian) H1
- Hero image cropped on mobile
- No sub-headline for clarity
- Poor CTA spacing
- Hamburger menu clutter

AFTER (Optimized Layout)



Optimizations Applied:

- Canadian-specific H1 headline
- Hero image properly positioned
- Added engaging sub-headline
- Refined CTA button spacing
- Clean nav (no hamburger)

Strategic Recommendations

NEAR TERM

Weeks 10-15

- Complete Phase 4 analysis validation
- Monitor results across 5 new pages
- Document mobile optimization checklist as standard

MID TERM

Weeks 16-20

- Apply framework to remaining CA pages
- Conduct A/B testing on individual elements
- Desktop optimization initiative

LONG TERM

Q2-Q3 2026

- Cross-market expansion (US, EU5, JP, AU, MX) Already in Progress
- Mobile optimization framework template
- Cultural/linguistic refinements per market
- Above-the-fold content prioritization

Cross-Market Potential: The validated mobile optimization framework can be templated and applied across all Amazon Business geographies, potentially replicating the 180%+ CVR improvements.

Conclusion & Call to Action

Proven Results

- +15% mobile CVR improvement achieved through targeted optimizations
- Canadian-specific messaging significantly improved relevance and engagement
- Hero image positioning fixes prevented visual disruption on mobile devices
- CTA spacing refinements improved user experience and click-through rates

Immediate Actions

- Scale validated framework to all remaining CA Non-Brand pages
- **Evaluate cross-market application for US and JP markets**
- Implement continuous A/B testing for headline variations
- **Develop mobile optimization playbook as replicable standard**
- Target >3.0% CVR across all optimized pages

Success Metrics

Phase 4 CVR Target

>2.0% across all 5 pages

Remaining Pages

Rolled out by end of Q1 2026
