DG Test results and CPS Y25 Testing Plan

PURPOSE

This document presents the results of our Google Demand Generation (DG) campaigns in the US, UK, and JP, demonstrating the effectiveness of this approach in driving brand awareness and search interest in Amazon Business. Key highlights include a +76% in “Amazon Business” search intent in the US, +135% in the UK, and +142% in JP; indicating potential for driving customer acquisition. Learnings from this test will inform future testing of Demand Generation ads to increase enterprise-level intent.

DEMAND GEN OVERVIEW

Google DG campaigns provide an efficient way to reach potential Amazon Business (AB) customers within enterprise organizations. By utilizing Google’s Discovery Feed, Gmail, and YouTube placements, we can engage target audiences with visually compelling ads. DG ads’ strength lies in its advanced targeting capabilities, including lookalike segments that identify prospective CPS customers who look like our current Enterprise customers and haven’t yet interacted with AB. Combined with flexible bidding strategies optimized for clicks and highly tailored ad creative, DG ads deliver efficiency gains, resulting in +409% clicks with 71% less spend than our SSR accounts for the same period. (DG CPC $0.3, SSR CPC $3.4, CPS CPC $11.0)

RESULTS OVERVIEW

Brand Lift: This study measured how effectively our video ads influenced perceptions of our brand. While the US market showed limited lift in ad recall and consideration, the UK and JP markets showed positive results across all studies.
This variance likely due to the use of a lookalike audience based on existing AB registrants, a targeting strategy necessitated by privacy regulations. For future US campaigns, we will test broader targeting approaches to drive brand lift. Overall, viewers exposed to our ads demonstrated a 2% higher likelihood of brand recall, consideration, and potential purchase intent. However, this effect was less pronounced in the US market. (Data for each market below)

	A	B	C	D
1	**Overall**	**Ad recall**	**Consideration**	**Purchase intent**
2	US	2% Age 35-44	2.9% Age 35-44 1.3% Age 25-44 1% Male	No lift
3	UK	2% Lift	.7% Lift	2.1% Lift
4	JP	2.7% Lift	1.2% Lift	2% Lift

Search Lift: We also examined the impact of our DG ads on search behavior, specifically their ability to drive searches for relevant keywords. Searches for "Amazon Business" were higher across all target markets after viewing the DG ads: +78% in the US, +135% in the UK, and +142% in JP. These regional differences can be attributed to varying levels of brand awareness and market penetration. The higher lift in the UK and JP highlights the value of DG in less developed markets, where it can build brand awareness more rapidly and drive customer acquisition. In the US, DG ads reinforce our market leadership and contributes to sustained growth. These results support continued investment in DG as a core component of our marketing strategy.

	A	B	C
1	**Market**	**Search Term**	**Lift**
2	**US**	business amazon	78%
3		amazon business	76%
4		amazon business account	50%
5	**UK**	business amazon	221%
6		amazon business	135%
7		office supplies	62%
8	**JP**	amazon ビジネス	142%
9		amazonビジネス	

FUTURE STATE

CPS: Building on the results from our DG campaigns in driving brand search, we propose leveraging DG to generate interest and demand for CPS. We will initially focus on the US and UK markets with a total Y25 budget of $721K ($250K US, $471K UK). ~~In the US, we will continue to use lookalike audiences based on both our entire registrant audience as well as test an enterprise-only lookalike audience. We will refine our targeting in both markets by adding audience layers (see Appendix) to pinpoint enterprise users and drive qualified traffic to dedicated CPS landing pages, increasing enterprise consideration.~~
We will refine our targeting in both markets by adding audience layers (see Appendix) to pinpoint enterprise users and drive qualified traffic to dedicated CPS landing pages, increasing enterprise consideration. Additionally, we will leverage lookalike LiveRamp audience (only available in US due to privacy regulations) in the US based on both our entire registrant audience as well as test an enterprise-only lookalike audience. For next steps, the CPS team will provide necessary landing pages and creative assets, while the PS team will finalize the targeting strategy and implementation.

Appendix:

BRAND SAFETY:

- Brand protection measurements were taken from existing video campaigns (MA) and applied to Consideration
- Also chose Brand lift survey questions that pertain to paid acquisition. (Questions chosen below)
